## **Invisible Students: Institutional Invisibility and Access to Education for Undocumented Children**

### **Abstract**

In Canada, undocumented children are “institutionally invisible” - their access to education to be found in unwritten and discretionary practices. Drawing on the experience of a three-year university-community partnership among researchers, institutional and community stakeholders, this article examines how undocumented children become excluded from free education in Quebec. Proposing the notion of “institutional invisibility,” we argue that issues of access and entitlement for undocumented children are constructed within unwritten and ambiguous practices that make the lives of young people invisible to the institutional entities with which they interact. Through the establishment of a collaborative research space, we were able to hear a range of contradictory perspectives which have often gone unheard in simplistic representations of the “state” or “policies” as homogenous entities. The article reflects on the role of action research in both documenting dynamics and pathways of invisibility in undocumented children’s access to education, as well as in initiating social change - as both horizontal, and vertical mobilisation.

The invisibility occurs because of a peculiar disposition of the eyes of those with whom I  
come in contact.

Ralph Ellison, *Invisible Man*

## Introduction

This article is about the making of institutional invisibility in relation to undocumented students in Canada. It is about particular dispositions of the eyes of those who come in contact and, often, do not come in contact at all, with undocumented children and their families. And, finally, it is about the ways in which we tried, through the establishment of a community-university partnership, to unmake this invisibility.

We define here “institutional invisibility” as a set of norms and practices that are often unwritten and ambiguous, making specific groups of people disappear, in a social, legal and political sense. Families living without legal status exist in such space of non-existence - outside national borders, hidden within niches of social reality (Coutin, 2003).

In Canada, between 200,000 and 500,000 persons are estimated to live without legal status - a quarter of whom are minors (Goldring et al., 2009). Approximately 3,000 undocumented school-age children are considered to live in Quebec (Rousseau et al., 2013). The precarisation of legal status has been the consequence, on the one hand, of the tightening of immigration policies and, on the other, of the negative public opinion, shifting from representations of the vulnerable “other” to the idea of migrants as potential fraud and criminals (Crépeau and Nakache, 2006). These increasingly restrictive policies

1  
2  
3 have also jeopardized the access to services of many people living with a precarious  
4 migratory status, making them illegal and vulnerable at multiple levels (Magalhaes et al.,  
5  
6 2010).  
7  
8

9  
10 This article analyses a specific situation of institutional invisibility: the limited  
11 access to education for undocumented children in Montreal, Canada. Under Quebec law,  
12 even if access to public education for all minors is both a right and a requirement, *free*  
13 education is provided only to legal residents. Specific categories of people are classified  
14 as legal residents of the province: Canadian citizens; permanent residents; asylum  
15 seekers; foreign workers. Yet, the specific group of “undocumented children” simply  
16 fails to be mentioned *at all* by the law.<sup>1</sup>

25  
26

27 The issue of access to education for undocumented children rested, therefore, on  
28 various discretionary institutional practices. The perceptions of teachers, the relative  
29 sensitivity of school administrations, the advocacy of community organizations, and the  
30 fear and silence of children and their families: they all played a role in determining  
31 whether a child would be successful in enrolling and attending school.

39 This article describes a three-year collaborative partnership among research,  
40 institutional, and community stakeholders which was established in order to understand  
41 these unwritten practices, and to move towards policy change. Our aim here is twofold.  
42 First, we document trajectories and discourses of invisibility in the context of access to  
43 education. Second, we reflect on the role of action research, and on its methodological  
44 and ethical implications, in conducting scholarly work and in promoting social change.

56  
57 <sup>11</sup> The fact that there is no mention of these children in the law could be partially explained by the relatively  
58 low numbers of children without legal status in Canada in the past decades.

As we will explain more in detail, this project was an unanticipated result of research: it emerged from the unexpected findings of a study on access to health care for undocumented migrant women and children.<sup>2</sup> When the voices of the women interviewed in this study paralleled the advisory committee's casework experiences – insisting that access to education for undocumented children was an urgent problem – we were prompted to broaden the initial study's objectives, and to conduct a project in order to shatter the institutional invisibility of this issue.

### **Framing institutional invisibility**

The issue of access to social services is deeply connected to a more profound ethical question: which children should have – or deserve - the right to these services? (Ruiz-Casares et al., 2010). Willen (2011) defines deservingness as the flip side of rights: “*rights* are presumed to have universal relevance, even when they are not universally enjoyed in practice, whereas *deservingness* is always reckoned in relative terms” (814). Particular groups may be considered undeserving specific rights, such as health care or housing, on the basis of presumed or actual characteristics – for instance, their status as non-citizens. In the last years, many scholars have examined discourses and representations shaping one's sense of deservingness, especially in relation to health care (Vanhuynne et al., 2013 , Willen, 2012 , Yarris and Castañeda, 2015).

However, norms of entitlement can be intertwined with pathways to access in non-obvious ways. For example, assessments of deservingness, as stated in policies and laws, may significantly differ from informal norms at local and regional levels (Watters, 2011).

1  
2  
3 These practices are often driven by what Lukes (2005) defines “covert preferences:”  
4 stakes and interests which may not even be voiced, fully articulated, or written. And yet,  
5  
6 these preferences can operate, at a local level, in important ways that are distinct from  
7  
8 broader government policies.  
9  
10

11  
12 Moreover, pathways to illegality can be shifting and ambiguous, bringing into  
13 question any clear boundary between legality and illegality (Bosniak, 2008), and further  
14 complicating the relationship between deservingness and exclusion from social rights  
15 (Bhabha, 2004). The issue of access to education for undocumented children is an  
16 example. While undocumented children are not explicitly constructed by the law as  
17 undeserving subjects, neither are they portrayed as deserving. Because of their  
18 contradictory status as both minors in need of protection *and* as illegal migrants who  
19 should be rejected, they simply fail to be mentioned at all by the law (Meloni et al.,  
20 2014).

33  
34 This article proposes the analytical framework of institutional invisibility in order  
35 to integrate the missing link between questions of access and deservingness. When it is  
36 morally difficult to assess who deserves what, as in the case of undocumented children  
37 who have a conflicting social status, silent attitudes and norms play a key role in  
38 determining access to services. To put it in another way, these children have limited  
39 access to education not because they are explicitly considered as undeserving, but  
40 because they are made institutionally invisible – as if they are not there. They are not  
41 even mentioned, in the debate of deservingness – precisely because their moral  
42 assessment would be problematic. Considering institutional invisibility as a social,

2  
3 administrative, legal and political construction then allows us to explore policies and  
4 practices which may be contradictory and which, often, are not even there.  
5  
6

7  
8 In the following section, we will describe in detail how the experience of our  
9 university-community partnership helped us to unpack the issue of access to education –  
10 at the level of laws, policies, and practices.  
11  
12  
13

### 14 15 16 17 18 **The process of collaboration**

19  
20 As Metha (2008) put it, “policy research is not only about evidence and outcomes but  
21 also about the process through which these are constructed” (235). In our case, the  
22 process of our research has been essential to underpin both evidence and outcomes. In  
23  
24  
25  
26  
27 determining the course of the process, our multiple roles have been certainly crucial.  
28

29  
30 As we already mentioned, all authors were involved in a research project on  
31 access to health care for precarious status women and children. Moreover, each of us was  
32 affiliated to both a university, and a community health centre or a community  
33 organisation. This double role allowed us to consider the problem of access to education  
34 not only from the perspective of researchers, but also from our experience of clinicians  
35 and community organisers who had a sense of what was happening on the ground.  
36  
37  
38  
39  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49 Furthermore, these multiple affiliations made it possible to establish collaborations with  
50 social workers, lawyers and community advocates willing to take action, and to offer  
51 direct support to undocumented children.  
52

53  
54 Our community-university partnership thus emerged from a confluence of events,  
55 both in the community and university setting. As mentioned above, unexpected findings  
56 from a research project on access to health care led to the establishment of a working  
57  
58  
59  
60

1  
2  
3 group on access to education in September 2010. With the involvement of researchers,  
4  
5 community organisations, community health centres, school boards, the Department of  
6  
7 Youth Protection, and the Ministry of Education, the working group aimed to: (1)  
8  
9 document barriers in access to education for undocumented children; (2) create  
10  
11 collaborative partnerships between researchers, community health centres and  
12  
13 community organisations, in order to facilitate access to education on a case-by-case  
14  
15 basis; and (3) to engage different stakeholders, in order to develop policies and  
16  
17 guidelines, as well as to monitor school practices.  
18  
19  
20  
21

22 The project can be divided into three phases, as shown in Figure 1. In the first  
23  
24 phase, the problem of access to education emerged as an unforeseen yet central finding of  
25  
26 our study. This prompted us to widen the research design to include access to education,  
27  
28 and establish a steering committee with community organizations, a legal clinic, and  
29  
30 children's advocates. Following this, in the second phase, the steering committee helped  
31  
32 to document pathways to access and developed a support network to help undocumented  
33  
34 children on a case-by-case basis. Finally, the third phase involved the mobilisation of  
35  
36 institutional stakeholders in a working group in order to develop policies.  
37

### 50 **Listening to women's voices**

51  
52  
53 As part of our research project on access to health care for precarious status migrants, we  
54  
55 interviewed undocumented women regarding access to health care during their  
56  
57  
58  
59  
60

1  
2  
3 pregnancy. While we initially expected to document the difficulties these women face in  
4 getting adequate medical treatment for themselves and their children, we came to realise  
5 that issues around education for their children were often more troubling and long-lasting  
6 for them.  
7  
8  
9  
10  
11

12 The barriers they encountered in access to education were multiple. Some women  
13 complained that the school administration refused to enrol their children because they did  
14 not hold valid immigration documents. Other children were accepted into school but were  
15 asked to pay high tuition fees, since they were considered non-residents. Moreover, both  
16 the school administration and the families did not know what documents were needed,  
17 and what the existing policies were. One woman, who has lived without legal status for  
18 many years, explained her confusion:  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31

32 *When I finally got my status and I went to Immigration, they asked me why my*  
33 *nine-year-old child didn't go to school for two years, when we did not have papers. They*  
34 *told me that my child didn't need a study permit to go to school. But I didn't know that!*  
35 *Because that's the thing: you need to be informed and know stuff. And when I went to the*  
36 *school, they just told me that they didn't want to take him. So they need to inform the*  
37 *school about that stuff, too! Because at the school, they asked me for a study permit*  
38 *although he didn't need it. And if you don't have papers, then you have to pay fees. And*  
39 *they charge like crazy!*  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50  
51  
52

53 Many women also voiced their concerns about school registration. Even if schools  
54 sometimes turned a blind eye and allowed children to attend school without paying fees,  
55  
56  
57  
58  
59  
60

1  
2  
3 children were not officially registered by the Ministry of Education. And, since their  
4  
5 education was considered unofficial, many of these students were denied their final  
6  
7 diploma. Although physically present in the education system, they were not formally  
8  
9 recognised as such.  
10  
11

12  
13 The mothers of these children certainly used the research space to make their  
14  
15 voices heard, their distress visible. By transmitting their worries, and their children's  
16  
17 suffering related to school – worries and suffering that can have a huge impact on health  
18  
19 and wellbeing – they were moving us toward action. Without asking us directly, they  
20  
21 prompted us to act.  
22  
23

24  
25 As in many action research approaches, the process of listening to the voices of  
26  
27 these women was a turning point that shifted the study design into an action-oriented  
28  
29 approach. Yet, different from more traditional participatory action research which is  
30  
31 conducted *by* and *for* those taking the action, with the goal to empower subjects and  
32  
33 move toward an emancipatory result (Chatterton et al., 2007), our research did not quite  
34  
35 follow such a straightforward line. Children and their families –the main subjects for  
36  
37 which our action was taken - were not directly involved in our collaborative endeavor,  
38  
39 and yet they played a significant role in reframing our initial research aims.<sup>3</sup>  
40  
41  
42

43  
44 Women's voices resonated with our experience not only as researchers, but also  
45  
46 as clinicians and community organisers. These voices also echoed the stories we heard  
47  
48 from many community organisers, service providers, and community health staff who  
49  
50 were part of the research project's advisory board. The resonance of the same issue  
51  
52 contributed to the feeling of urgency that stirred us to shift the research focus. And yet, as  
53  
54

---

55  
56 <sup>3</sup> Although we can consider, in important ways, our project as “action research” – a project where action  
57  
58 and research became intimately intertwined (Brydon-Miller et al., 2003), we did not follow more traditional  
59  
60 participatory action research approaches.

1  
2  
3 we came to realise, the same story turned into a completely different one, when it was  
4  
5 told from another perspective.  
6  
7

8 In November 2010, we organised a first meeting with different community  
9  
10 subjects that were interested and affected by the issue: two community organisations  
11  
12 which were also members of the advisory board of the project on access to health care; a  
13  
14 legal clinic serving precarious status migrants; a support centre for newcomer families;  
15  
16 and an organisation for children's advocacy.<sup>4</sup> The aim of this introductory meeting was to  
17  
18 create a steering committee of persons concerned; to document and detail the different  
19  
20 situations that precarious status immigrants faced; and to look for possible solutions.  
21  
22  
23  
24  
25  
26

### 27 **Community perspectives**

28  
29 The first issue emerging from the steering committee was the heterogeneity, not to say  
30  
31 the confusion, of practices. The puzzle faced by the women we met was also experienced  
32  
33 by community workers. They also lacked clear information about the norms adopted by  
34  
35 school boards, and the existing policies. Whereas undocumented children could be  
36  
37 accepted to some schools, they could be refused by others, being asked for different  
38  
39 identification documents or to pay diverse levels of fees.  
40  
41  
42

43  
44 Since the practices were so disparate and scattered, we decided that, as a first step  
45  
46 in moving towards policy change, it was necessary to act at the micro level, and to collect  
47  
48 data about what was happening on the ground. We created a collaborative support  
49  
50

---

51  
52  
53 <sup>4</sup> One person for each of these groups participated in the steering committee, for a total of nine persons  
54 involved, including us. Another twelve people involved in community organisations joined the group in the  
55 following months. Five meetings were held by the steering committee (before launching the working group  
56 with institutional stakeholders) and e-mails were often exchanged to discuss specific cases of access to  
57 education. The research team's role, through this entire process, was to organise meetings; coordinate the  
58 working group; and manage communication.  
59  
60

1  
2  
3 network among the members of the steering committee, in order to document cases of  
4  
5 denied access to education, and to help families enrol their children.<sup>5</sup>  
6  
7

8 The tactics of this horizontal mobilisation varied in response to different  
9  
10 circumstances. Here, we provide some examples of actions that were undertaken within  
11  
12 the group. In some instances, barriers to access were related to families' lack of  
13  
14 information and worries of being deported. Fear of disclosing immigration status to the  
15  
16 school, which would render children visible and more at risk, often prevented some  
17  
18 families from asking for full information about the registration of their child, or from  
19  
20 seeking advice. In this case, we would put the family in contact with the community legal  
21  
22 clinic which was part of our working group. This often helped to reassure the family  
23  
24 about their rights, or supported them with their immigration situation.  
25  
26  
27  
28

29 Other times, barriers to access emerged from the restrictive practices of schools or  
30  
31 school boards. When a school refused to enrol the child, or when the family could not  
32  
33 afford to pay the registration fees, we asked for the help of a social worker of a  
34  
35 community health center. The social worker would meet the family and provide an  
36  
37 assessment – attesting that the denial of education would cause the child irreparable  
38  
39 damage for her/his psychological development and wellbeing. This professional  
40  
41 assessment was used strategically by the family, with the support of the community  
42  
43 organisation. Specifically, it was used to advocate for the discretionary power of the  
44  
45 Ministry of Education to waive registration fees. This process was repeated with a  
46  
47 number of cases and, though successful in the cases we followed, it was very onerous for  
48  
49  
50  
51  
52

---

53  
54 <sup>5</sup> The steering committee documented and supported about 20 cases per year. Thanks to the collaboration  
55 between the members of the committee, each time we have been successful in getting the child enrolled in  
56 school. In the context of case support for children, we acted as intermediators: we linked the families (who  
57 were referred to us by community organisations) with social workers. Our twofold role of researchers  
58 affiliated to a community health center, or to a community organisation, was essential in this process.  
59  
60

1  
2  
3 the family and the workers. Moreover, the families often felt highly exposed in having to  
4  
5 present their personal case to the Minister of Education's office.  
6  
7

8 To be sure, these actions were extremely precarious - as insecure was the  
9  
10 population they were supporting. They were based on the singularity of each case, and  
11  
12 did not guarantee that the child could successfully be enrolled at school. However, this  
13  
14 work of support and documentation uncovered, and made clear, two of the main  
15  
16 challenges to access to education. First, at the level of the law, a clear policy was missing.  
17  
18 Second, at the level of practices, contradictory attitudes informed and shaped the  
19  
20 decisions of schools. While school principals had to comply with budgetary frames and  
21  
22 obligations in regard to access to education for non-resident children, they had also to  
23  
24 respect children's rights and ensure access to school. As a result, decisions remained  
25  
26 arbitrary, and a similar situation could lead to completely divergent results, if taken by  
27  
28 different school directors or institutions.  
29  
30  
31  
32  
33

34 This experience of case advocacy, then, underscored the importance of political  
35  
36 change to create a normative system of entitlement to education, rather than a fragile  
37  
38 network of discretionary access. Yet, in order to make some effective change at the level  
39  
40 of policies, we still lacked certain key voices and perspectives: those of school boards  
41  
42 and policy-makers. We then decided to include institutional stakeholders in the working  
43  
44 group - at the local, and the provincial level.  
45  
46  
47  
48  
49

### 50 **Identifying policy actors**

51  
52  
53 In organising a first meeting in March 2011, an initial challenge was to strategically  
54  
55 identify the most appropriate people with whom we could collaborate. Our decision was  
56  
57  
58  
59  
60

1  
2  
3 informed by the experience of the steering committee, which unpacked the knot of access  
4 to education from three different angles: the law; its application; and the protection of  
5 children rights. We then believed that it was essential to involve subjects who dealt with  
6 these three perspectives in their daily work.  
7  
8  
9

10  
11  
12 At the level of the law, we contacted the Ministry of Education, which has the  
13 power to determine broad guidelines for the education system, and to allocate resources  
14 to the school boards. Equally important, the Ministry guarantees the validity of the  
15 diplomas – a key issue for many undocumented children. A consultant working in the  
16 Ministry of Education, in the department of services for cultural community, actively  
17 participated in the working group. His collaboration has been decisive in providing  
18 information about the existing policies, and about the policy changes which were most  
19 likely to be acceptable to the Ministry. Although not involved in decision-making at a  
20 higher level, this person played an important role in establishing a trust relationship  
21 between the working group and the Ministry.  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32  
33  
34  
35

36 At the level of law application, we involved different school boards in the region  
37 of Montreal. School boards are responsible for the registration of children and they hold  
38 jurisdiction over planning, supervision, evaluation, and support. Among the five school  
39 boards in Montreal, four decided to participate in the working group.  
40  
41  
42  
43  
44  
45

46 Finally, in terms of children's rights protection, we included an organisation for  
47 child advocacy and two Youth Protection agencies responsible for the security and  
48 development of a child – regardless of the child's immigration status.<sup>6</sup> Notably, the  
49 security or development of a child may be considered to be in danger if a child does not  
50  
51  
52  
53  
54

55  
56  
57 <sup>6</sup> All of their services are mandated by the Québec Youth Protection Act, the Canadian Youth Criminal  
58 Justice Act, and other applicable legislation.  
59  
60

1  
2  
3 attend school, or is frequently absent without reason. We thus hoped that the youth  
4  
5 protection institutions were able to advocate for greater access to education for  
6  
7 undocumented children.  
8  
9

### 10 11 12 **The power to discover the law**

13  
14  
15 The very fact that a space of discussion and collaboration was created between  
16  
17 community and institutional actors was the first step to unravel, and connect together the  
18  
19 discourses and interests of different subjects - in the hope of determining a common  
20  
21 strategy of action. The first action we took in this direction was to discover the grey areas  
22  
23 within the law, and its different (mis)interpretations. By discovering the law, we mean to  
24  
25 uncover law and regimes of power as comprising “more than legal codes, government  
26  
27 policies, and bureaucratic apparatuses” (Coutin, 1993 88). As Calavita (1998) has argued  
28  
29 with respect to the production of illegality in Spain, “there may be no smoking gun, but  
30  
31 there is nonetheless a lot of smoke in the air” (557). Without any smoking gun, we still  
32  
33 had to understand where all the smoke came from.  
34  
35  
36  
37  
38

39 Not surprisingly, we found that there was little discussion about undocumented  
40  
41 children and access to education in either immigration or education policies. The bulk of  
42  
43 the action took place off the record. What slowly emerged, during the meetings of the  
44  
45 group, was a reciprocal understanding of the myriad of underground practices, half-  
46  
47 written guidelines, and contradictory interpretations of the law which evoked opacity,  
48  
49 rather than transparency.  
50  
51  
52

53 As we explained earlier, there was a “legal black hole” (Wilde, 2005) regarding  
54  
55 these children, meaning that there was no mention of this specific category and their  
56  
57  
58  
59  
60

1  
2  
3 rights. Interestingly, this legal vacuum created the impression, especially in institutional  
4 subjects at higher levels, that the issue did not exist at all. In the first meeting of the  
5  
6 working group, the representative of the Ministry tended to minimise the problem: after  
7  
8 all, there was no mention of these children in the law, and these issues were never  
9  
10 brought to their attention by the schools. When he later was confronted with the  
11  
12 experiences of school boards and community organisations, he expressed his genuine  
13  
14 surprise, stating that “we have never perceived the situation as real.” In the rooms of the  
15  
16 Ministry, indeed, it was as if these children were not part of social reality.  
17  
18  
19  
20  
21

22 While for policymakers the issue was non-existent, it was real enough at the level  
23  
24 of its application. For school boards, it was acutely felt as a financial burden to their  
25  
26 system capacity because they received no additional funding for undocumented children  
27  
28 attending their schools. They were then left with a huge responsibility and were often  
29  
30 caught in an ethical dilemma - that of deciding who should have access to school. Each  
31  
32 school board adopted different administrative practices of entitlement – they decided  
33  
34 what documents were needed, and what categories of undocumented children they should  
35  
36 accept. These norms were not entirely official or written,<sup>7</sup> nor homogenously applied by  
37  
38 schools. The school board directors on the working group expressed a feeling of being  
39  
40 isolated: they were alone without any guidelines or information from the Ministry of  
41  
42 Education, and without any support from other school boards. Each school board was, in  
43  
44 fact, completely unaware about how others in the region of Montreal were struggling  
45  
46 with similar situations. The meetings of the working group became then essential in order  
47  
48 to establish a reflective space of discussion where, for the first time, the issue was  
49  
50  
51  
52  
53  
54

55  
56  
57 <sup>7</sup> Procedures about access to education could be, for instance, published on the website of a school board,  
58 although an official institutional policy was not necessarily communicated to schools.  
59  
60

1  
2  
3 recognised. And where, most importantly, the heterogeneity of unofficial practices  
4  
5 became visible.  
6  
7

8 Two main problems were raised by the school boards. Firstly, there were multiple  
9  
10 enrolment procedures. A few schools demanded only a birth certificate as a proof of  
11  
12 identity, as required by the provincial regulation, while most also required a valid  
13  
14 immigration document. For particular cases of children in a legal limbo – for instance,  
15  
16 children who were awaiting a decision on humanitarian and compassionate grounds -  
17  
18 some schools accepted the child without asking for any registration fees, while others  
19  
20 refused access altogether.  
21  
22  
23

24 Secondly, even when the child managed to enrol in school, there were barriers in  
25  
26 terms of bureaucracy and administration. Normally, a child receives a lifetime permanent  
27  
28 code from the Ministry of Education, which allows the student's credits to be recognised  
29  
30 provincially and to issue the diploma. In the case of children registering for the first time  
31  
32 without any legal residency, the lack of proof of Quebec residency prevented a permanent  
33  
34 code from being issued. As one school board representative bluntly put it in one of the  
35  
36 meetings, “if you do not have a permanent code, simply you do not exist.” Without this  
37  
38 code, children then became legally and socially invisible.  
39  
40  
41  
42  
43  
44  
45

### 46 **Establishing an action plan**

47

48 The collaborative environment, which was slowly formed over the months, helped to  
49  
50 unveil the messiness of the practices and to foresee potential solutions. With time, people  
51  
52 felt comfortable expressing their concerns and perspectives. The fact of listening to  
53  
54 others’ experiences created a common space of reflexivity – where people questioned  
55  
56  
57  
58  
59  
60

1  
2  
3 their own practices, and gradually shifted the perception of their own role. For instance,  
4  
5 many institutional subjects – especially the ones who did not encounter undocumented  
6  
7 children in their daily work – initially felt that they were not directly concerned. Yet,  
8  
9 when they later learned about the difficult ways in which others were trying to  
10  
11 accommodate these children, they became aware of the constraints of policies, but also of  
12  
13 their own institution. At the same time, community actors also nuanced the negative  
14  
15 opinions that they had about institutions, becoming more conscious of the challenges that  
16  
17 they faced. This process facilitated a common understanding of the issue, and moved  
18  
19 institutions towards action.  
20  
21  
22  
23

24  
25 It was after one year that the working group decided that time was ripe to take  
26  
27 collective action. A letter and a background document were sent to the Ministry of  
28  
29 Education, outlining the main problems and possible solutions. The representative of the  
30  
31 Ministry helped in giving suggestions and insights about how to develop the letter. At the  
32  
33 level of access to school, we asked the Ministry of Education to develop clear policies  
34  
35 and guidelines that would make undocumented children living in Quebec one of the  
36  
37 categories having free access to education. The premise of the working group was that  
38  
39 education should be free for all children *residing* in Quebec. Then, we recommended that  
40  
41 the legal definition of “resident” should be modified, allowing free education as based on  
42  
43 factual residency rather than legal immigration status. At the level of administrative  
44  
45 barriers, we requested that a permanent code had to be issued. Moreover, a document on  
46  
47 the long-term social and financial negative cost of the exclusion of undocumented  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 children from education was drafted by one of the researchers, in order to support the  
4  
5 adoption of new policies.<sup>8</sup>  
6  
7

8 The draft of the document was a gradual, slow and collaborative process. Regular  
9  
10 meetings were organised in order to discuss and finalise the documents, with the  
11  
12 participation of many members of the working group. Researchers and community  
13  
14 organisations prepared a preliminary draft; then, school boards and the representative of  
15  
16 the Ministry gave their feedback and added a layer of complexity to the explanations of  
17  
18 different situations of denied access.  
19  
20  
21  
22  
23

### 24 **Policy change**

25  
26  
27 In September 2013, subsequent to the advocacy letter and to public demonstrations of an  
28  
29 activist collective for access to education for undocumented children,<sup>9</sup> the Minister of  
30  
31 Education finally announced new regulations. Yet, the main changes allowed not a  
32  
33 reformulation of the notion of resident - which would have required an integral  
34  
35 modification of the law. Rather, they broadened the categories of non-resident children  
36  
37 who were entitled - as an *exception* to the law - to free education. The new policy added  
38  
39 new classifications of precarious status migrants,<sup>10</sup> as well the definition of children  
40  
41  
42  
43  
44  
45  
46  
47

---

48 <sup>8</sup> Jill Hanley analysed the long-term negative social impact of exclusion from education.

49 <sup>9</sup> This public mobilisation had a significant impact in terms of strategic media pressure, bringing the issue  
50 to the public eye. Yet, it was also perceived with ambivalence by institutional actors, some of whom felt  
51 that the organisation was promoting a “radical” portrayal of the issue that unnecessarily polarised the  
52 debate. The tone of the public actions also created the impression that undocumented children can almost  
53 never attend school, which may have the unintended result of increasing the fears of families and may  
54 discourage them from seeking support.

55 <sup>10</sup> New categories include, for instance, children who are refused refugee status but come from countries  
56 where there are moratoria on removal. It is important to note that these categories of children all have a  
57 temporary legal right to remain, and do not explicitly include undocumented children who are not allowed,  
58 by any legal means, to remain in the national territory.  
59  
60

1  
2  
3 “being followed”<sup>11</sup> by social workers at a community health center or a Youth Protection  
4  
5 Agency.  
6  
7

8 In these new regulations, undocumented children were yet again not mentioned at  
9  
10 all. Two were the main reasons. First, a redefinition of the category of resident would  
11  
12 have required a change in the law, which is a much slower and complicated process.  
13  
14 Second, perhaps these children were still unmentionable, due to their unlawful status.  
15  
16 And yet, the notion of “being followed” was deliberately left ambiguous, in order to  
17  
18 allow space for action. The strategic support network working to get children into schools  
19  
20 – which, before then, was merely informal and only included community organisations –  
21  
22 was now, even if ambiguously, recognised and extended to institutional subjects such as  
23  
24 youth protection agencies.  
25  
26  
27  
28

29 With the passing of this new guideline, the institutional actors involved (school  
30  
31 boards, community health center and youth protection agencies) felt that they were given  
32  
33 the capacity to address most of the problem from an administrative perspective. In our  
34  
35 experience since the changes, every case we have brought forward, with an attestation  
36  
37 that the child is being followed, has been successful in enrolling the child in school  
38  
39 without tuition fees and with an official registration code. So although this policy offers  
40  
41 only a backdoor, it does seem to be open.  
42  
43  
44  
45

46 At this point, the most important difficulty limiting access has become lack of  
47  
48 information. Those most concerned by the issue (community groups and families  
49  
50 themselves) remain largely unaware of the changes. A year and half after the new  
51  
52 regulations, families are still approaching community groups unaware of the loophole  
53  
54 that can allow their children into school relatively easily. Or, perhaps even more  
55  
56

57  
58 <sup>11</sup> What in French is translated by “prise en charge.”  
59  
60

1  
2  
3 disturbing, parents reported that they knew about the new regulation but feared to expose  
4 their status to institutions. Without an official “don’t ask, don’t tell” policy, the assurance  
5 that school boards respect confidentiality and do not share information with immigration  
6 authorities fail to assuage the fears.  
7  
8  
9  
10  
11

### 12 13 14 15 **Concluding reflections** 16

17 Although the objective of obtaining full access for undocumented children has not yet  
18 been totally reached, the process of the working group - its positive results, and its pitfalls  
19 - are significant in highlighting key questions concerning how we can better understand  
20 the making of illegality and social marginalisation.  
21  
22  
23  
24  
25  
26

27 To be sure, the experience of our collaborative research brought questions of  
28 access and entitlement into a new light. While hearing different yet complementary  
29 perspectives, we came to realise that we were dealing with hidden practices of  
30 invisibility, rather than transparent norms. In the last years, many scholars have called for  
31 a study of illegality as an historical, political and social construction (see: De Genova,  
32 2002). In line with this approach, many have examined the ways in which legal regimes  
33 make migrants undeserving and outsiders from the community of citizens. Yet, in the  
34 case of undocumented children, social exclusion was created within the silences and  
35 absences of laws. If laws did produce something, it was an *absence*, rather than an  
36 excess. Proposing the notion of “institutional invisibility,” we argue that access and  
37 entitlement are often constructed within unwritten and ambiguous practices that make the  
38 lives of people invisible to the institutional entities with which they interact.  
39

59  
60

1  
2  
3 For the Ministry of Education, it was as if these children did not exist at all –  
4 simply because there was no mention of them in the law. For school boards, these young  
5 people represented an unspoken dilemma. They were not officially recognised as students  
6 with a valid registration code, even if they were physically present in the school system.  
7 They were there, yet they did not exist at a legal and administrative level. The arbitrary  
8 attitudes of some of the school boards were implicitly condoned by the silence of the  
9 Ministry, and unchallenged by families and children who were afraid to expose their  
10 status.  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21

22 In order to understand these opaque and intricate ways in which institutional  
23 invisibility is shaped, it becomes crucial to create different collaborative research  
24 strategies beyond the university. It is key, in the field of undocumented migration, to  
25 open a dialogue with all subjects involved: policy-makers, school administrators,  
26 community organisations (Atweh et al., 2002 , Ross et al., 2003). But this is not simply  
27 necessary because researchers, as many have argued, “need to translate their work more  
28 effectively and for a much broader array of audiences” (Willen et al., 2011: 333).  
29  
30  
31  
32  
33  
34  
35  
36  
37  
38

39 In our experience, the methodological and epistemological dimensions became  
40 blurred, in a more profound sense - opening new ways for thinking about issues of  
41 illegality and access to social services. The shift in our research focus – from health care  
42 to education - was triggered by those who had the most at stake: the mothers of  
43 undocumented children themselves. By voicing their concerns, they made visible to us an  
44 issue that we did not initially intend to study. Our research process was not linear – it did  
45 not begin with a question and ended with a solution. Neither was our research objective  
46 in any reductive sense. It was rather an unpredictable process of sequential reflection,  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 research, and action, carried out with and by different subjects (Cornwall and Jewkes,  
4 1995). Research and intervention then became intimately entwined, and it became  
5 impossible to separate the two in any meaningful way. This created possibilities for  
6 learning and acting that reformulated the entire research process as reflective endeavour  
7 between different voices and stakes (Meloni et al., 2015). In this sense, we acted because  
8 women's concerns triggered a reflective network of other voices in the community and  
9 research settings – in which our voices, as well as our actions, became an inextricable  
10 part of it.  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21

22 Collaborative and action research then became the key for understanding the issue  
23 of access to education in a more comprehensive perspective – from the ground up, and  
24 from the centre out. Through the act of listening to multiple covert stakes, we were able  
25 to hear a whole range of contradictory perspectives which have often gone unheard in  
26 simplistic representations of the “state” or “policies” as homogenous entities. The  
27 creation of a common and reflective space for these different voices – which were silent  
28 or alone before - was essential in order to highlight the blind and contradictory spots of  
29 practices surrounding access.  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40

41 The partnership between community and institutional actors has been a  
42 significant, even if only a partial, first step that can potentially help to establish different  
43 and alternative forms of recognition. Yet, the understanding which emerged from our  
44 process did not lead to full translation at the level of the policies, and of the law.  
45 Undocumented children now have access but through an ambiguous channel. Our work is  
46 far from over. Making visible the invisible is a gradual and ongoing process when it  
47 comes to recognising, with different eyes, what was not seen before.
